DONALD NORTH AUDIO

DNA Sonic Décor model 100 on-wall speakers

The DNA Sonic Décor on-wall speakers are the premier, audiophile-quality wall mount speakers combining contemporary design with rich, engaging sound!

Being only 4.25 inches (10.8cm) deep, they match perfectly with pictures, paintings, plasma and LCD flat panel televisions.

Specially tuned for wall mounting, the Sonic Décor speakers are better looking and sounding than any other similarly sized in-wall, bookshelf, or on-wall speakers.

Unlike in-wall speakers which require expensive custom installation, creating permanent big holes in your walls and limiting room layout possibilities, the Sonic Décor on-wall speakers are easy to mount anywhere with just 2 small screws.

From unpacking to perfectly level wall mounting and wiring, you can be enjoying your favorite tunes in less than 30 minutes.

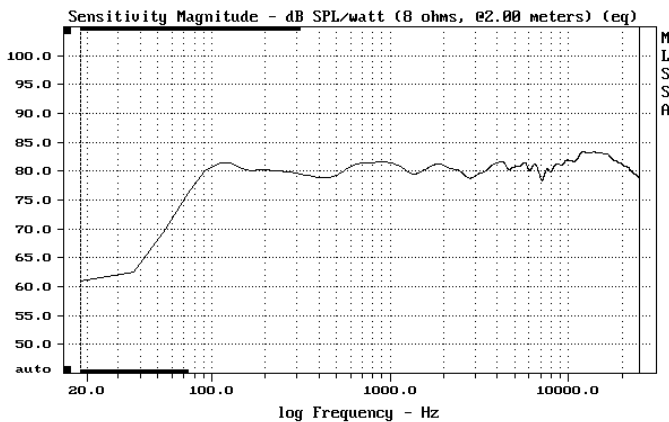

With unlimited color options (over 80 color combinations standard and paintable panels available), from classic to contemporary, you choose the style to fit the décor of your room. Finally there is a speaker that the entire family can approve and enjoy!

DNA Sonic Décor model 100 on-wall speakers

Features include:

- Recessed rear panel for flush fitting to wall with slot for wire
- Wall bracket holds bubble level for perfectly level mounting
- All wall-mounting hardware (brackets, screws, wall inserts) is included
- Speaker can be mounted in two orientations (tweeter above or below woofer) for optimum acoustical performance
- Cabinet available in two colors: **black** and **Swiss coffee white**
- Grille available in three colors: **black**, **light gray**, and **Swiss coffee white**
- Decorative trim panel available in **10 colors** - see front side
- Smooth sanded, unpainted MDF trim panels also available for custom painting
- Specially tuned crossover for on-wall placement. By incorporating proprietary crossover technology, the frequency response is very smooth, allowing musical instruments and vocals to be heard accurately. See comparison frequency response graphs below:
